COMMON WEBSITE STRUCTURES
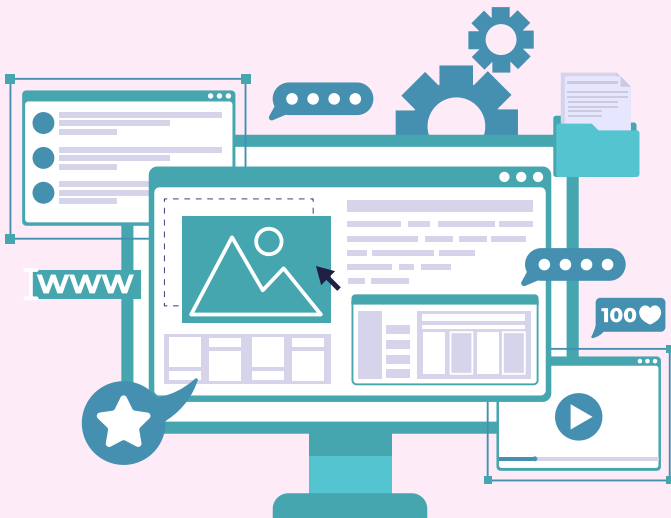

Website structure

A website structure mainly refers to how the pages on the website of yours to be organized, connected to intuitive navigation and thereby by boosting up the user experience and thereby increasing the performance of SEO. A well- maintained website typically has a strong hierarchy, which is linked with main pages and subpages in a logical manner. This will help the visitors to make use use of the information which they need through the site effectively

3 Common Website structures

1. Sequences

It is organised in a sequencial order. Pages are placed one after another.

2. Hierarchies

Complex informations can be organised in hierarchical model. With a single homepage and websites around it, this is an easy structure.

3. Webs

It is a net like structure connecting homepage to all t=other pages through internal links.
