

# WEB DEVELOPMENTS PROCESS

YARDDIANT

## 5 STAGES OF WEBSITE DEVELOPMENT

# Web development process

Web development is the process of creating, designing, and maintaining websites. The whole web development process can be simply splitted into five steps

## **1. Analysis and Planning**

Website goals to be achieved are analyzed at this stage. Developers try to understand the client's requirements and plan accordingly.

## **2. Web Design and Development**

Web designers create an optimized design structure with all visual components and contents for the website as per the client requirements.

Web developers code the website using programming languages based on the required website functionalities.

### **3. Testing and review**

Testers test the website after the completion of design and development. They thoroughly check the whole website to find bugs and errors to be fixed.

### **4. Deployment**

The website is launched at this stage. Once the website is cleared of all bugs and issues the can be set live. Monitor the performance and working of the website.

### **5. Maintenance**

Website is regularly monitored and maintained. Regular updated is to be done on the website and check the performance.
