WHAT IS STATIC SITES?

YARDDIANT

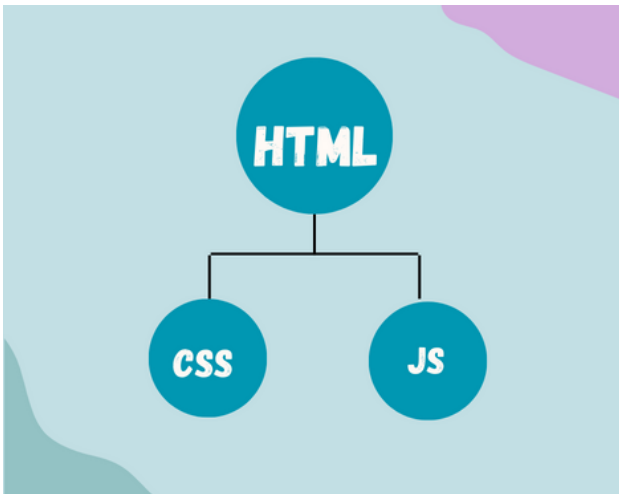

INTRODUCTION

Static websites are built with fixed code. Changes could not be made to the website apart from the developer. A static website is displayed in the same way as it is stored.

It is easy to create a static website. It does not require server-side processing or any programming language to build the website. This is an effective way to build a website if there are no frequent updations to be done.

Advantages of static websites

- **Cost-effective**
- **Highly performing**
- **Easy to rank in search**

Disadvantages of static websites

- **Low user experience**
- **Less interaction with users**
- **Poor scalability**
- **Content is fixed**
